

Hydraulic Pneumatic Engineering

Trade

Manufacturing

Units/Kitting
we deliver complete finished solutions made especially for our installations.

Components of hydraulic and pneumatic
Cylinders, motors, valves, pumps, proportional and servo valves, heat exchanger, accumulators, standard aggregates and a lot more.

Installation and handling devices
in the standard area and customized for your individual production.

Sealing elements
for hydraulic, pneumatic and special applications.

Pipeline
welded, flanged or with DIN fittings.

Screwing techniques/connection elements
With DIN connections, flare type fittings, flat and leak free fittings.

Switchboard
in the hydraulic and pneumatic sector, completely installed and checked, including electronic units and their wiring.

Pipelines and flexible hoses
Up to 2500 bar.

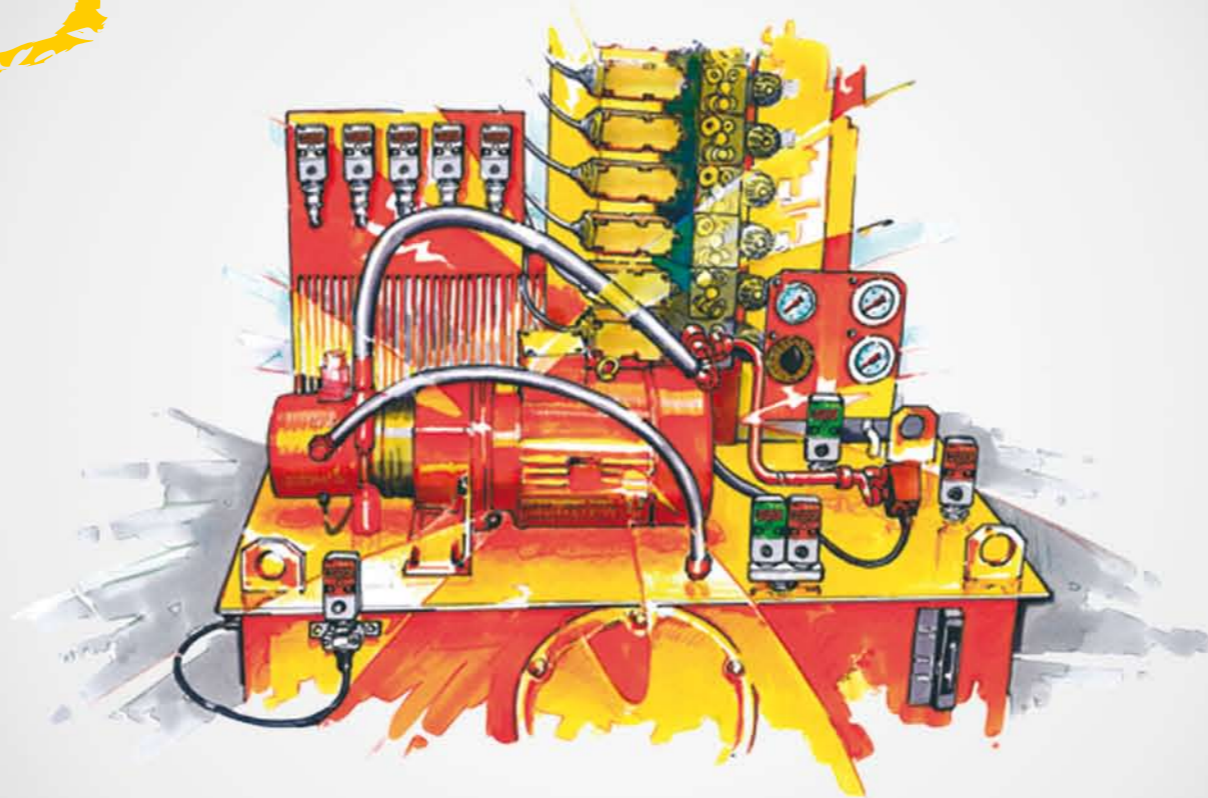

Hydraulic cylinder
with special dimensions and accessories, for example integrated weighing systems. Short delivery times through own production.

Consulting and training
also by you on-site.

Commissioning, maintenance and repairs
your installations and machines.

Valve blocs
specially designed for your applications, for example compression security blocs.

Filter technology, oil and filter service
for hydraulic, pneumatic and special applications.

Motor-pump-units
Hydraulic aggregate
with container volumes of up to 10,000 liters, Electric, diesel and gas motors with performance of up to 220 kW.

Hydraulic hose on site service "Schlauchblitz"

Installations in the area
Hydraulic and pneumatic.

Repairs of hydraulic cylinders, motors, pumps, valves and components with a following test on our test rigs.

Recurring tests
according to BetrSV and BGR 500 for compression molding, pressure devices, hydraulic accumulators and installations.

Special machines
with hydraulic and pneumatic motors. Compression molding, modernization retrofitting of machines and installations.

Planning and construction
your motors, machines, installations, network and their control technology.

Customized service!

Engineering

Schematic diagrams, operating manuals (also for your complete installations), CE-compliance certificates, compressor-molding security, design according to EG printer and machine guidelines.

Service

24 hour service – "Service you can count on"

What you should know about us!

During the 60's and 70's, Lutz Wiebeck was a development helper in North and East Africa. There he led workshops for automobiles and farming machines. In 1979, Lutz Wiebeck founded the company Wiebeck as a learned blacksmith and master farm machine mechanic. He started his business with agricultural engineering. Due to the increased use of hydraulics with construction machines and industrial applications, the main points for the business quickly developed: maintenance, repair, planning, projection and finishing of hydraulic installations and components in all sectors. Here high quality work was always adhered to – also for the vendors. The business relationships that began then still have a very high value today. A continually increasing number of orders made it possible to look confidently into the future. Thus, in October 1990, the new business rooms in Breisach could be purchased. Through the dynamic support of his son Jörg Wiebeck (agricultural and mechanical engineering master mechanic) and Dirk Wiebeck (diploma in engineering), the company continued to develop. In addition to the trade, production, service and repair of hydraulic and pneumatic installations, another central competence came about. From then on, the company supported its customers with customized engineering services. Lutz, Jörg and Dirk Wiebeck founded the Wiebeck OHG in April 2007. In September of the same year, Lutz Wiebeck left as a shareholder and gave over his business stock to both of his sons.

"A company is not a condition, but rather a process."
